Operating Instruction Electronic Pocket Balance

zu beziehen bei sold by

www.conatex.com

1. Technical Data

Weighing range:

200 g

readability d:

0.1 g

operating conditions:

10 - 30 °C

max. 85% air humidity (not condensing)

power supply:

batteries 2 x LR44

2. Operation

Turn the cover-disk to position "AUF/OPEN"

Press the ON/OFF key (; the balance displays "8888" and switches to "0".

- Place the weighing object in the middle of the weighing platform; the weight in grams is shown on the display.
- By pressing the balance can be reset to "0".
- After the weighing process is finished the cover-disk should be turned back to "ZU/CLOSE".

4. Adjustment

- By pressing
- 7

for 3 seconds until "CAL" appears on the display.

- Let loose the ON/OFF-key; the display shows "100".
- Place a 100 g adjusting weight (class M3) on the weighing platform.
- The display switches to "F" and the adjustment is complete.
- If other messages are on the display, the adjustment was faulty. Please repeat the adjustment process.

Important Notes

- Do not overload the balance (when overloaded, error message "E" appears)
- With the occurrence of electromagnetic fields deviations of the displayed weight value are possible. In case of deviations change location.
- Avoid high air humidity, vapours and dust, because the balance is not hermetically closed. Do not bring the balance in direct contact with liquids. Liquids could enter the load cell.
- No permanent load on the weighing platform.
- Never operate the balance in rooms where danger of explosion exists.
- · Regularly check the balance with the test weight.
- Warranty expires as soon as the balance is opened.
